1. INTRODUCTION

Little is known about disease and causes of death in marine mammals around the British Isles. Without this knowledge it is difficult to interpret the significance of sudden die-offs such as that which occurred in 1988 when approximately 17,000 seals were killed by the Phocine Distemper Virus (PDV).

At present a collaborative Marine Mammal Strandings scheme for England and Wales has been funded by the Department of the Environment (DOE) since 1990 which involves *post-mortem* and other studies of seal and cetacean carcasses. This research is being carried out by the Institute of Zoology (IOZ) in close collaboration with the Natural History Museum (NHM) and the Sea Mammal Research Unit (SMRU). *Post-mortem* examinations of Welsh strandings are carried out by the Department of Veterinary Pathology, University of Liverpool and the Institute of Zoology, London. It includes studies on the correlation between contaminant levels and disease, reproduction, and immunological status. Samples taken include those for virology, bacteriology, parasitology, histopathology, measurement of heavy metals, organochlorines and radionuclides, DNA fingerprinting and fixed and frozen material for archive.

Records of live and dead strandings of cetaceans are kept by the Strandings Co-ordinator and are passed for correlation at the Natural History Museum (NHM). Since 1913 records have been, and continue to be kept, by the NHM, in co-operation with the Receiver of Wrecks and HM Coastguard.

Funding towards this project in Wales has been provided by the Welsh Office through the Natural History Museum, London, Countryside Council for Wales (CCW) and the Department of the Environment through the Institute of Zoology, London. Support of certain items of equipment has been provided by the Environment Agency and the Green Seas Initiative.

2. MATERIALS AND METHODS

A 24 hour Strandings Answerphone (**01348 875000**), is interrogated at regular intervals. A message requests callers to leave details of the stranding and location, along with their name and contact phone number, so they can be reached if confirmation of details are required. (If the stranding is a live stranding then a message on an answer-phone informs the caller to contact the RSPCA immediately. see 2.1)

A network of volunteers, rangers, wardens, coastal officers, harbour masters etc. has been formed who can be contacted by the Strandings Co-ordinator to confirm the stranding, assess its condition and secure the animal from the effects of the tide, predation etc. until it can be dealt with.

The following criteria are applied: -

2.1 Live Animals

(Condition code 1)¹

In 1994 the Marine Animal Rescue Coalition (MARC) was formed. This consists of all the major animal welfare and conservation bodies involved with marine mammals in the UK. It has been agreed that in the case of a live stranding the first point of call would be the RSPCA as they support a manned 24-hour emergency phone. The RSPCA would then contact the relevant organisations, Marine Environmental Monitoring etc.

2.2 Dead Animals

(Condition code 2a extremely fresh as if just died)¹

(Condition code 2b slight decomposition)¹

The animal is retrieved using a 4-wheel drive vehicle and trailer. Health and safety precautions are followed with the animal being handled only with gloved hands. It is placed in a body-bag then taken immediately for *post-mortem* examination.

(Condition code 3 moderate decomposition)¹

The animal is retrieved using a 4-wheel drive vehicle and trailer. Health and safety precautions are followed with the animal being handled only with gloved hands. It is placed in a body-bag then taken to a storage facility where it is bagged, labelled and stored for later transportation or transported immediately. (see 2.3).

(Condition code 4 advanced decomposition)¹

(Condition code 5 mummified carcass)¹

Species identified, basic measurements and 6 teeth taken from the lower jaw if possible. Health and safety precautions being observed. Local council then contacted for safe disposal of remains.

All live and dead stranded cetaceans are reported to the NHM and are allocated a “SW” number. All dead seals are reported to the Institute of Zoology (IOZ) and are allocated a SS number. Records of all strandings in Wales are kept by the Strandings Co-ordinator and passed on to the NHM and ZSL on a regular basis.

¹ Body condition based on the Institute of Zoology condition code.

Copies of *post-mortem* examination reports are sent from the Strandings Co-ordinator to the finder and others associated with the relevant stranding.

2.3 Storage of animals

During 1995 the decision was taken not to store animals frozen, since as a result of freezing the following had been found:-

- Loss of micro-organisms, viruses and bacteria.
- Damage to tissue for histology.
- Possible loss of fluids from internal organs which may effect analysis of toxicology results.
- Decrease in interpretation of normal and abnormal tissues due to haemolysis of red blood cells.
- Internal organs had remained part-frozen in some animals extending and delaying the *post-mortem* examination.

If the animal is not to be transported immediately then storage at +4⁰ Celsius is preferable for a maximum time period of one week.

As a result of this change of procedure, the present storage facilities kindly provided at Fishguard are no longer suitable for the storage of animals and new facilities are needed. All suitable carcasses are now transported immediately for *post-mortem* examination, resulting in increased mileage and reduction in cover on the Welsh strandings network.

3. RESULTS

3.1 Marine Mammals

Table 1.

1997 Total number of reported marine mammal strandings (Welsh Coast).													
Species	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	TOTAL
Bottlenose dolphin	0	0	0	0	0	0	0	0	0	0	0	0	0
Common dolphin	0	0	0	1	0	1	0	0	0	0	0	0	2
Risso's dolphin	0	0	0	0	0	0	0	0	0	0	0	0	0
Striped dolphin	0	0	0	0	0	0	0	0	0	0	0	0	0
Pygmy sperm whale	0	0	0	0	0	0	0	0	0	1	0	0	1
Harbour porpoise	1	0	2	0	1	9	15	1	9	4	7	1	50
Cetacean sp. Indent.	0	1	1	0	2	0	0	0	0	0	0	0	4
Total cetaceans	1	1	3	1	3	10	15	1	9	5	7	1	57
Grey seal	0	0	3	3	0	3	1	1	30	46	5	8	100
Total animals	1	1	6	4	3	13	16	2	39	51	12	9	157

Table 2.

1997 Number of live cetacean strandings (Welsh Coast).													
Species	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	TOTAL
Pygmy sperm whale	0	0	0	0	0	0	0	0	0	1	0	0	1
Harbour porpoise	0	0	0	0	0	1	0	0	0	0	0	0	1
Total animals	0	0	0	0	0	1	0	0	0	1	0	0	2

Of the 57 cetacean strandings 3.5% live-stranded (2 animals), 1 cetacean had live-stranded giving birth and subsequently died, 1 cetacean was found dead but indicated as having live-stranded under *post-mortem* examination.

Table 3.

1997 Number of animals suitable for <i>post-mortem</i> examination.													
Species	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	TOTAL
Pygmy sperm whale	0	0	0	0	0	0	0	0	0	1	0	0	1
Harbour porpoise	0	0	1	0	0	5	5	0	0	0	0	0	11
Total cetaceans	0	0	1	0	0	5	5	0	0	1	0	0	12
Grey seal	0	0	1	0	0	1	0	0	1	2	1	4	10
Total animals	0	0	2	0	0	6	5	0	1	3	1	4	22

Of the 157 strandings 14% (22 animals) were suitable for *post-mortem* examination.

Table 4.

1997 Number of animals decomposed / disposed of. (Welsh Coast).													
Species	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	TOTAL
Common dolphin	0	0	0	1	0	1	0	0	0	0	0	0	2
Harbour porpoise	1	0	1	0	0	3	10	0	7	4	7	1	34
Cetacean sp. Indent.	0	0	0	0	2	0	0	0	0	0	0	0	2
Total cetaceans	1	0	1	1	2	4	10	0	7	4	7	1	38
Grey seal	0	0	2	3	0	2	1	1	5	13	4	3	34
Total animals	1	0	3	4	2	6	11	1	12	17	11	4	72

Of the 157 strandings 45.9% (72 animals) were decomposed and the relevant local council contacted for safe disposal of remains. Funding for seals again was limited throughout the year and this is reflected in the relatively high numbers of animals passed to local councils for safe disposal.

The remaining 40.1% (63 animals) were confirmed reports but were unable to be retrieved or disposed of due to various reasons. i.e. no access to stranding, washed away or retrospective reports. Two additional animals thought to be porpoises were reported by Milford Haven Coastguard seen floating in the sea off Borth and Ynyslas. (Cetacean and seal data: Appendix 1& 2).

3.2 Unusual Occurrences

On 9th June a “dolphin” was reported swimming erratically between shore and 20 metres distance, at Aberystwyth. The RSPCA and a local rescue group was contacted, both attended but no animal was observed. On 13th June an adult pregnant **porpoise** SW1997/93 was reported live-stranded at the same location. The animal was having difficulty giving birth and eventually died.

SW1997159 a 2.7 metre female **Pygmy sperm whale** (*Kogia breviceps*) which had recently given birth, was reported stranded at Manorbier, Pembrokeshire in October. This is only the 5th reported stranding of this species for the UK since 1913 (NHM data). Quantities of reddish black tarry material (5-7 litres) was observed coming from the genital slit. Further enquiries to other researchers working on this species via the internet, together with the *post-mortem* examination, found that these animals have the ability to “ink” as a startle response similar to squid. The material is held in an intestinal diverticulum and is ejected from the anus. Apparently the Japanese call these animals “firecracker” or “rocket” whales as they emit this reddish cloud and dive when startled.

4. OTHER MARINE ANIMALS REPORTED TO THE NETWORK.

4.1 Turtles

A total of 4 Leatherback Turtles (*Dermochelys coriacea*) were reported stranded to the network in Wales. None of these animals were in a fresh enough condition to undergo *post-mortem* examinations. However, skin samples were obtained from all animals with the help of CCW staff. These samples will be sent to America via Glasgow University for studies on DNA.

A further 3 animals were reported at sea in the North of Cardigan Bay, 2 live and 1 dead.

ST1997/2 found stranded at Pembrey was a female which had been tagged. Investigations of the details found on the tags through the database in Paris revealed that the animal had been tagged on the 21st July 1994 in Ya : lima : po beach, French Guiana, South America and not seen after this date. (remains buried at Fishguard).

ST1997/3 found stranded in Spalding, Lincolnshire, was reported to this network. This animal had been seen swimming up a large drainage ditch until it had reached a sluice gate where it died. Tom Tew at JNCC in Peterborough was contacted who managed to take samples before the animal was removed to a landfill site by the local authority.

ST1995/1 and ST1995/2 were exhumed to recover part of the skeleton for further DNA studies at Glasgow University.

Aerial surveys were started in 1997 to try and obtain numbers of live leatherback turtles off the coast with the help of the MAFF Fisheries Patrol. Unfortunately, due to bad weather and aircraft re-tasking only 2 flights were flown with observers onboard. It is hoped that this facility will be offered to us again in 1998.

4.2 Fish

A **Basking shark** (*Cetorhinus maximus*) was reported by the Tenby Harbour Master caught in fishing gear. The animal managed to free itself.

5. SEA EMPRESS OIL SPILL.

A request was made to Marine Environmental Monitoring by the Sea Empress Environmental Evaluation Committee (SEEEC) Shoreline and Terrestrial Task Group -Mammals sub-group, to review marine mammal strandings from the West Wales coast for the period 5 years prior to the Sea Empress Oil Spill (SEOS) and for approximately 1 year after. Additional data was included from surrounding coastlines. A comparative review of the Braer oil spill was included.

ref: SEA EMPRESS OIL SPILL (SEOS) - WEST WALES. Review of Marine Mammal Strandings from the West Wales coast 1991-1996.

Rod Penrose 1997.

6. SAMPLES.

Normal procedure for the taking of samples is from fresh animals that have been taken for *post-mortem* examination.

Following a request from Dr Bob Morris, samples of melon and blubber from cetaceans were taken. Whenever possible those animals not suitable for *post-mortem* examination were also sampled by the Co-ordinator. These samples were stored frozen at -20 degrees C and passed to Dr Morris at the end of the year.

Samples of muscle additional to fresh samples taken at *post-mortem* examinations have also been taken by the Strandings Co-ordinator from animals which would normally have been disposed of. These samples have been stored at -20 degrees C for later radionuclide comparisons with samples taken in Ireland.

7. FUNDING.

As stated previously funding towards this project in Wales has been provided by the Welsh Office through the Natural History Museum, London, the Countryside Council for Wales and the Department of the Environment through the Institute of Zoology, London. Support of certain items of equipment have been provided by the Environment Agency and the Green Seas Initiative.

Additional funding through the "Interreg" programme, part of the European Regional Development Fund, has been secured through the Countryside Council for Wales. This funding will allow further essential equipment to be purchased for the project together with collaboration with the Irish Strandings Network to enable both sides of the Irish Sea to be monitored.

8. EQUIPMENT.

The strandings telephone based at Fishguard was found to be not working on the 24th November due to being destroyed by a lightning strike, calls were diverted to the Co-ordinators home telephone until the line was repaired and the equipment replaced.

Funding of 50% has allowed the purchase of an All Terrain Vehicle (ATV quad bike). This ATV has enabled reports of strandings to be investigated far more efficiently including recovery of animals which previously would have been abandoned due to

distance from road. The trailer has been modified to accommodate both the ATV and the recovered stranded animal.

9. TRAINING.

Training was organised for the Strandings Co-ordinator and key volunteers in the use of the ATV. The Institute of Acoustics, Underwater Bio-sonar and Bioacoustic Symposium held at Loughborough University was attended.

10. TRAVEL.

In excess of 8500 miles were covered by the Strandings Co-ordinator in retrieval and transportation of animals in 1997. The majority of suitable animals were taken to Liverpool University and others to the Institute of Zoology, London.

11. ADMINISTRATION.

In excess of 36 copies of *post-mortem* examination reports were posted out to finders and associated interested parties concerning each relevant stranding.

12. ACKNOWLEDGEMENTS.

Aberystwyth Veterinary Investigation Laboratories for their help in storage of animals.

Gerry Jones, Paul Newman, Lin Gander and Jemma Pratt for their help in retrieving animals.

MAFF Fishery Patrols for help with aerial surveys.

Powell Strong / Jemma Pratt, Grey seal pup production and population monitoring:
Ramsey Island & Nth. Pems., CCW/MEM project. For supplying pup mortality data.

Robin Pratt for providing base of operation at Fishguard

Strandings Network Volunteers too numerous to mention in their help confirming, reporting and securing animals for collection.

Tim Jones CCW for taking samples from Leatherback turtle ST1997/1 & ST 1997/4. Tom Tew JNCC
for taking samples from Leatherback turtle ST1997/3.

Welsh Office / Natural History Museum, Countryside Council for Wales for providing funds towards the project.

13. APPENDICES.

- Appendix 1. Cetacean strandings data for 1997.
- Appendix 2. Atlantic grey seal strandings data for 1997.
- Appendix 3. Leatherback turtle strandings data 1997.

Appendix 1. Marine Environmental Monitoring 1997 Welsh Coast Strandings (Cetaceans).
